Section I: Coding

I. Problem Statement

Ravi is developing a student registration system for a college. To efficiently store and manage the student IDs, he decides to implement a doubly linked list where each node represents a student's ID.

In this system, each student's ID is stored sequentially, and the system needs to display all registered student IDs in the order they were entered.

Implement a program that creates a doubly linked list, inserts student IDs, and displays them in the same order.

Input Format

The first line contains an integer N the number of student IDs.

The second line contains N space-separated integers representing the student IDs.

Output Format

The output should display the single line containing N space-separated integers representing the student IDs stored in the doubly linked list.

```
Refer to the sample output for formatting specifications.
Sample Test Case
Input: 5
10 20 30 40 50
Output: 10 20 30 40 50
Answer
#include <stdio.h>
#include <stdlib.h>
typedef struct node
{
  int data;
  struct node* next;
  struct node* prev;
}Node;
void insertAtend(Node** head,int data)
  Node* newNode = (Node*)malloc(sizeof(Node));
  newNode -> data = data;
  newNode -> next = NULL;
  newNode -> prev = NULL;
  if(*head == NULL)
    *head = newNode;
    return;
  Node* temp = *head;
  while(temp -> next != NULL)
    temp = temp -> next;
```

```
temp -> next = newNode;
  newNode -> prev = temp;
void Traverse(Node* head)
  Node* temp = head;
  while(temp != NULL)
    printf("%d ",temp -> data);
    temp = temp -> next;
  }
int main()
  int n,e;
  Node* head = NULL;
  scanf("%d",&n);
  for(int i=0;i<n;i++)
    scanf("%d",&e);
    insertAtend(&head,e);
  Traverse(head);
}
```

Status: Correct Marks: 10/10
